LED ROUND
Pop-up Display

LED display,also called led screen, led video wall, or led sign, with its unique advantages, has gradually replaced the traditional billboards, light boxes, etc. LED display advertising has become a new force in the media industry.

Traditional advertising can only show pictures, But LED display/led video wall/led screen can perfect combine text, pictures, video, and sound with high resolution, high brightness and full color.

LED display Advertising screen can easily attract the attention of pedestrians, and also are easy to remember, which can generate greater advertising effectiveness.

Round Led display screen now are widely applied in outside of different occasions, such as coffee shop, bars, stores, etc.

Features

- Round Shape LED Screen.

- Fashion design with round shape led display for double sides.

- IP 65 Waterproof Design;
  With waterproof tape around the modules and PVC board on surface to prevent the rain and dust.

- Wide Range using Occasions
  High brightness for hanging outside of different occasions such as coffee shop, bars, stores, etc.

- Support remote control by connecting with the WIFI adapter, using android app, IOS app or PC software to download files.

LED
Easel Stand
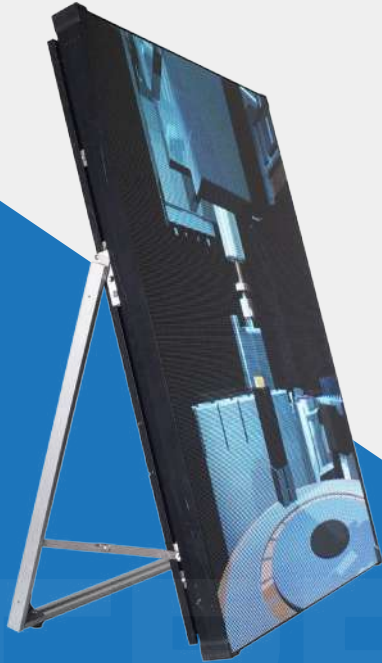

Creative Visual Solutions introducing Floor Stand Standalone LED Screen WiFi WLAN Digital Signage LCD Display.

Ideal use for Product Display Description and Mall, Showroom, Restaurant as well as in events and exhibitions.

Floor Stand Standalone LED Screen WiFi WLAN Digital Signage LCD Display

Physical measurements – W 50.3CM X H 76 CM and size in pixel W224 x H456

- Supported Version: Standalone, Android
- Play mode: Repeat All/Repeat None/Repeat One
- Support files: All/Photo/Photo/Movie/Play list
- Extra function: Slide show, loop, repeat playing type

INTERACTIVE
Dance Floor

Life is a stage show, every steps can motive the youth vitality. LED interactive dance floor bring the rhythm of dance match up with music. Interactive, sound and lighting effect gang together, all-directional interact, motive the body and heart.
It's the new element of entertainment, the new favorite of artist.

At present, the human screen interaction is mainly reflected in the interactive dancing floor LED display. The dancing floor LED display subverts the traditional vision, touch and hearing.

All the creativity and imagination can be realized in the immersive dynamic experience space, which can create an abstract world, Magic Ocean and magic lawn, forest, dynamic sea world, dynamic ground, and virtual beaches make people feel the influence of aesthetics and optics.

Use them for promotional purposes such as at corporate events or trade shows. The floor panels can create text effects along with abstract graphics and will attract attention.

TRANSPARENT
Touch Display

■ The transparent LCD screen delivers HD or 4K images just like standard professional display.

■ The key difference is that the screen substrate is clear : white pixels appear fully transparent, black ones opaque.

■ The full range of RGB colors in between have semi-transparent properties that can be used to great creative effect with the content you design.

HOLOGRAPHIC
PRISM

At Prism Interactive, we aim to provide impeccable services in multidisciplinary sectors ranging from 3D Architectural to Brand Building, Animation, Digital Marketing, Graphic Designing, and Photo & Videography. We turn ideas to life while providing unmatched services with hassle free experience & excellent customer oriented approach.

Hologram Prism 180 Degree is Holographic Shocase with Three Side. It combines A physical Products With Holograohic 3D Animation.

HOLOGRAPHIC
Fan-3D

3D Holographic Air Fan Display is one of the most cost-effective display solutions to create a holographic illusion.

This hologram machine creates the illusion of a hologram floating in the air. The hologram set is extremely simple to install and use.

The brightness and strong colours make it very visible even in environments with a lot of light.

The amazing illusion is created by a LED light bar that spins at high speed, turning the hardware structure practically invisible and a floating video effect. Changing the video content is extremely easy.

☀ 3D Hologram Advertising Display.

↻ Use 3D Holographic Air Fan display technology, display no-border 3D effect, your ad will float in the air.

◉ 1200 round per minute high speed, provides true-to-life image and dynamic effects.

📶 Wi-Fi wireless picture transfer with APP (scan the QR code on the user manual to install the APP)

⊞ Provide custom picture and video service Power EfficienPlug and Play Display.

PROJECTOR

PROJECTORS AND PROJECTION SCREENS RENTAL WITH VARIETY OF SIZES FROM SMALL TO LARGE.

Projection screen rental can be a challenging task. If you are not sure about what screen size is needed for your event, please consult with one of our projection specialists.

If you want us to run it for you no problem. We have a professional team with over 10 years of experience.

PA SYSTEM

Quality Sound System,
Low Rental Rates & Reliable Service

- Mixer Rental and Player Rental
- PA system Rental
- Dinner and Dance Sound System Rental
- Line-Array System Rental
- Microphone Rental and Wireless Microphone Rental
- Outdoor Sound System Rental

HIRENDER S3
Media Server

Hirender S3 media server can manage the playback control process conveniently with its powerful dual control mode (timeline + window). The innovative program management module makes the multi-window and playback easier and more flexible. It can support up to 15360*2160 pixel-to-pixel display and supports multiple servers cascaded, and many effects. At the same time, the multi-channel synchronized outputs can simplify the management of super large LED screen splicing, projector, edge blending, creative LCD.

Hirender is used to design and control all the different media elements of your show – Video, Still images, Animations, Graphics, Live Camera feeds, Sound, Lighting Desk and Midi devices. PLAY it in REAL TIMELINE. Play your content on timeline with various cue lists on multiple displays.
It is combination of the powerful computer hardware & dedicated software for show control. ONLY ONE SERVER and YOU ARE ON. The main advantage of using Hi-RENDER is the ease of use. You do not need to configure Production and Display system like Watchout and other server. You can connect many HI-RENDER servers to control huge pixels canvas.

Function & Features

Window mode supported

Time-line mode supported

Support external device controlling (video processor, switcher)

Hirender S3

Support 4k capture card

Strong video decoding and 2D/3D rendering

Support super-resolution video

User friendly operation

Support preview mode(PRV)

C1+N9 HD Stage Console
Live Event Solution

NovaStar's C1+N9 HD Stage Console professional visual solutions for events provides excellent image display, switching, and monitoring, all in one powerful and comprehensive package.

The C1+N9 is the perfect choice to meet the needs of this type of application. The N9 acts as a switcher, splicer and processor, while the C1 console handles the stage control. With a dual-touchscreen design, the C1 removes the necessity of complex and slow software operation, allowing you to effortlessly control the stage.

The C1 is also designed with a joystick and T-Bar. The joystick is used to precisely adjust the size and position of layers. The TBar supports adjustment of 1024 levels of layer transparency, finely controlling the transition effects of presets and PVW, PGM for switching.

Thanks to the cool lighted buttons, highly sensitive joystick and T-Bar, plus the two LCD screens, the C1 is extremely easy to operate, making live stage control most convenient.

The C1 is also designed with a joystick and T-Bar. The joystick is used to precisely adjust the size and position of layers. The TBar supports adjustment of 1024 levels of layer transparency, finely controlling the transition effects of presets and PVW, PGM for switching.

Thanks to the cool lighted buttons, highly sensitive joystick and T-Bar, plus the two LCD screens, the C1 is extremely easy to operate, making live stage control most convenient.

FUNCTION & FEATURES

■ Supports two LCD screens, one for monitoring, and the other touch screen for operating. During operating, users can view on one of the LCD screens the input source status, preview status and status of output on LED display, so that the overall situation is under control.

■ Supports screen mosaic, easy mosaic, output image quality adjustment, BKG settings, EDID settings, test patterns, and switching from normal display to blackout with one button press.

■ Supports preset copying, use of preset templates, preset customizing, saving of custom presets, preset data cleanup, lockup of preset area on C1 operation panel.

■ Supports layer editing, layer image quality adjustment, layer border settings, and layer freezing.

■ Allows for operations, such as FTB, freeze or Take operation, to multiple seamless switchers.

■ Supports remote or live control of terminal video processors through RJ45.

APPLICATIONS
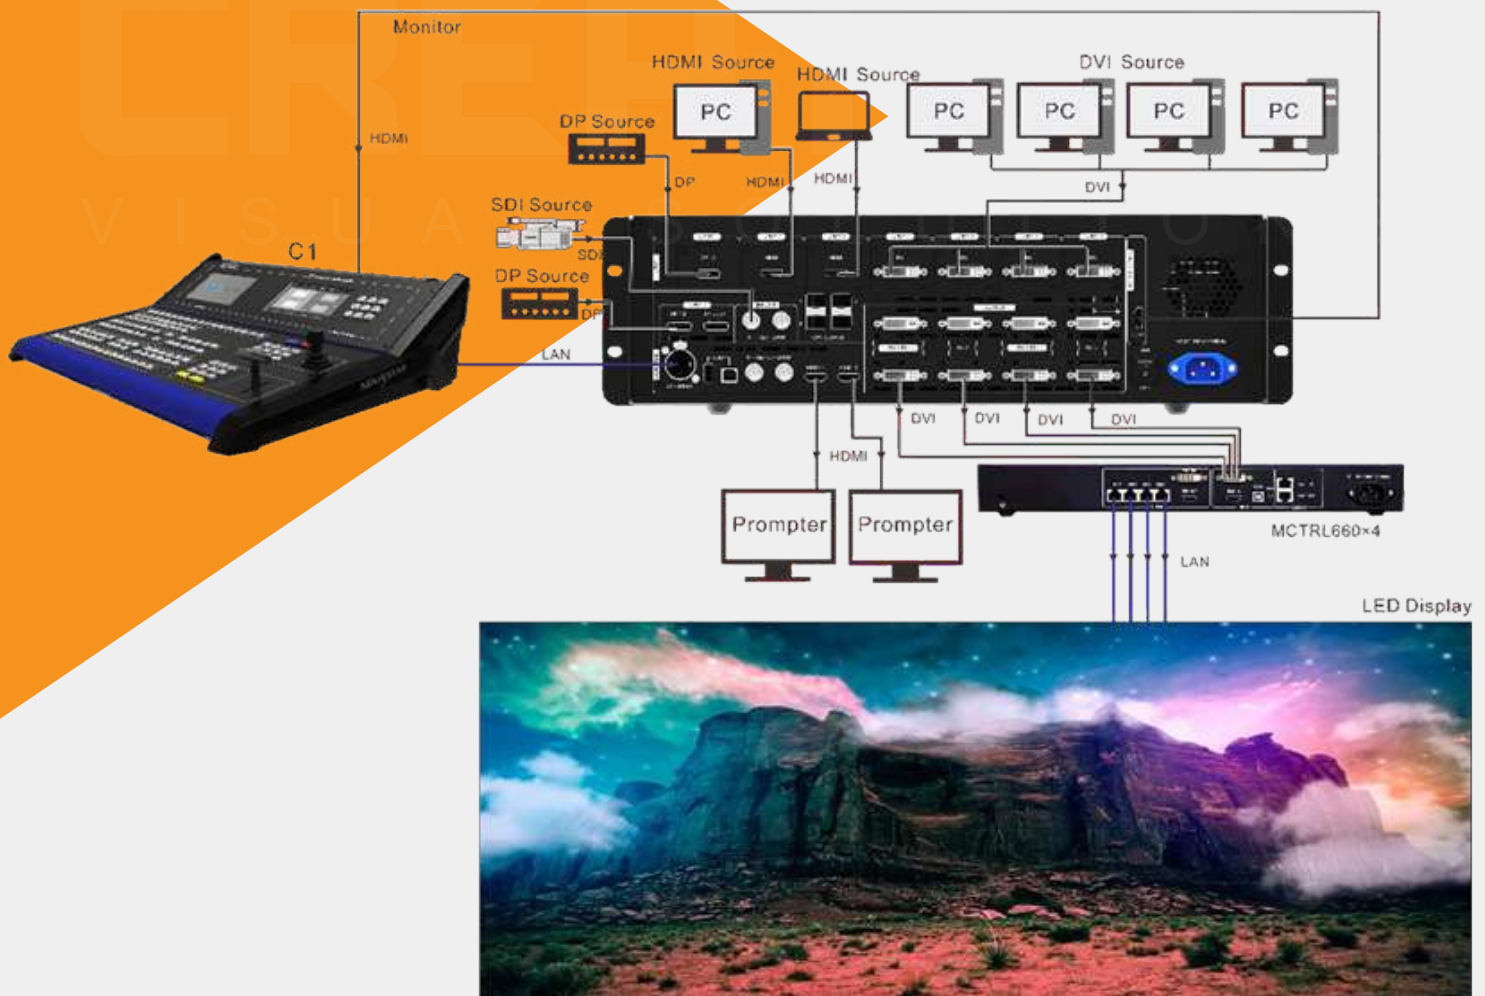

N9 - MULTI SCREEN VIDEO CONTROLLER/ SPLICER

The N9 is a high-performance multi-screen video switcher independently developed by NovaStar. Using high-performance video processing technologies, it is capable of processing and outputting ultra-high quality images. The N9 also provides powerful video signal receiving capability. It can support 9 inputs and 4 DVI outputs at the same time. A single N9 can load up to an 8KK screen, and multiple N9 units can be cascaded for output.

The N9 can work with NovaStar's desktop console C1 and make the operation of N9 on stage more convenient.

It is also equipped with brand-new smart management software V-Can from NovaStar to provide richer image mosaic effects. Thanks to the powerful capabilities of receiving and processing a variety of video signals, the N9 can be widely used in various scenarios, such as intermediate and high-end rental, stage control, media centers, big conference sites, exhibition sites and concert control centers.

FEATURES

- Up to 9 inputs, including 1 × dual-link DP 1.1 (can be replaced by HDMI 1.4, DP 1.1 or dual-link DVI), 2 × HDMI 1.3 (can be replaced by DVI/VGA/CVBS), 4 × DVI,1 × DP 1.2 and 1 × 3G-SDI.

- Up to 7 layers supported at the same time. Max. Resolution of each layer: 3840×2160, 7680×1080 or 1920×4320.

- Customized BKG settings you can load an image file from the control computer or capture an input source image displayed on the screen as the BKG image.

- Shaped layer, layer mask and color keying supported

- Layer cloning and Z-order layer sorting supported

- Input source image cropping supported

- Quick mosaic and custom mosaic

THERMAL SCANNER

FACE RECOGNITION
ACCESS CONTROL

The 7-inch face recognition temperature intergrated detector is a perfect combination of traditional applications based on face recognition and infrared temperature detection. Suit for Hotel, access gate, office building, school,shopping mall, communities, public service.

Adopts high-precision infrared non-contact temperature detector, can automatically detect body temperature, accurate and efficient.

Temperature measurement range: 30-45 (0C) , Accuracy can reach ± 0.3, Face recognition within 500ms; Face library 22400 person; Total can storage 100,000 recognize record.

Dual sensor with living detect, face recognition distance 0.3-3M; Auto identify people without masks and give real-time warning; Real-time output of identify results and voice prompts.

FEATURES

Attendance
It has to be collect people record easily in excel Sheet

Non-Contact
No need to touch the equipment, it can be identified by entering the range, convenient for hygiene

Convenience
No need to carry it, no need to cooperate, liberate hands, identify fast.

Safety
Never Lost, not easy to copy, real people to prevent camouflage

Stability
Different angle/ different light / face changes can be accurately identified

Accuracy
Can quickly measure human body temperature and report unusual body temperature for unusual body temperature

Concurrency
Simultaneous detection and identification of multiple faces, high recognition effiiciency.

Easy to collect
No special equipment, comput-er/Laptop camera can collect faces anytime anywhere.

RGB LINK 3072 PRO SWITCHER

RGBLink CP 3072PRO integrates the console with the switch, allowing the user to seamlessly switch the video effects through the WYSIWYG interactive control panel including buttons, knobs, T-BAR, OLED panel, and indicator lights. In the shortest time, the best results are displayed in the view of the audience. CP 3072PRO scalar supports a variety of optional input modules with any, as well as a variety of optional output mode any setting, easy to use the push and pull lever to switch and to achieve one-click adding for graphics with special effects. The CP 3072PRO mixer redefines the console and switcher that can be used in any scenario thanks to its all modular design, flexible set up, easy to operate and unique shape.

FEATURES

- Integrated vision mixer & scaler

- 5 mega pixel capacity

- Three output option modes – Dual 2K, 4Kx1K & 4K

- Select or set output resolutions to any requirement

- Dedicated source Preview output with Multiview

- Wide range of transition effects built in

- Up to 3 video layers including background for presentation Program to Preview applications Position, scale, crop video layers freely

- DSK/Key on foreground video layers

- Wide range of Masks can be applied to any foreground video layer

- Variable edge blending on foreground layers

PERFECT CUE
Visual Cueing System

Perfect Cue Mini is a wireless audio and visual cueing system that has the same exceptional RF performance and the same interconnections (except for the belt-pack intercom pass-through) as the larger Perfect Cue, and, like the larger Perfect Cue, can control two computers. The communication between the transmitter and cue light is solid at 300 feet.

Perfect Cue enables a speaker to send cues to a projectionist using a wireless hand-held transmitter or to remotely control presentation software via dual programmable USB ports. The Perfect Cue Mini is designed with a fold-away bracket so that the unit can slide easily into a laptop carrying case. It is compatible with all of the Perfect Cue transmitters and may interconnect with other Perfect Cue Minis, Perfect Cues or any of our cue light accessories via Cat5 or XLR cable.

The relationship between transmitter and receiver are hardcoded via dipswitch settings. This enables the user to establish any relationship between the transmitter(s) and receiver(s). For example:

- Perfect Cue systems can work in proximity without interfering with one another
- One transmitter can control multiple cue lights
- One cue light can be controlled by multiple transmitters
- One cue light can control two computers in sync
- One cue light can control additional cue lights (by wiring together the cue lights)

FEATURES

■ Activate / isolate multiple cue lights on a single line.

■ Match cue light and actuator communications on 16 selectable channels.

■ Connect hand-held actuator for hard-wire backup.

■ Connect multiple cue lights via Cat 5 or XLR cable. Only one unit requires power.

■ Remotely control presentation software via programmable keyboard commands delivered through two USB ports. Maintain mouse functionality

PREVIEW ROOM

Preview Room mainly used for conferences where presentations and presenters having back to back presentations from podium its quiet difficult to manage timeline for back to back presentations cause every presenter having different presentations and copying presentation and testing on system during running event its took time and it will creates lots of confusion on podium as well as presentations loading /copying is wastage of time of all audiences.

What is Preview Room?

Preview room is one technical setup where presenters come before their presentation to technical desk where presenter can check his presentation and copy his presentation and technical team check slot or presenter schedule and hall of particular presenter presentation accordingly respective presentation will be copy to respective server or podium as per time line so when presenter came on podium his/her presentation file is ready for presentation. At a time we can handle multiple halls as well as presentation.

In Technical term it has been managed by couple of system and networking with tailor made software applications.

STRUCTURE

PREVIEW ROOM

- HALL-A
- HALL-B
- HALL-C
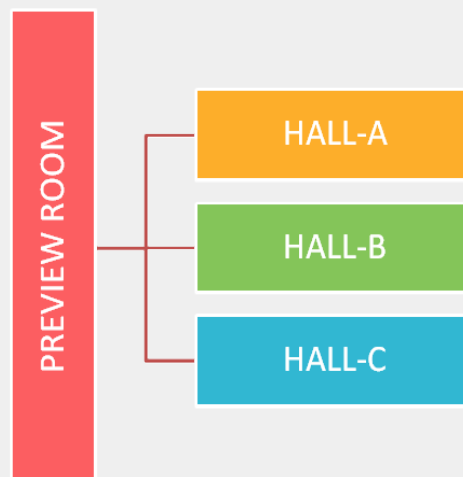

Video conference
Web Casting

The technology of webcasting gives us then opportunity to reinvent the lecture.

Webcasting is the internet broadcasting of streaming audio possibly. accompaied by streaming video so that it can be viewed via a web browser on a personal computer.

Webcasting use grow as internet broadband communications becomes more available and more affordable, as people seek to avoid travel, and as speakers and learners see demonstration of its effective use.

Webcasting in education allows visual and audio communications that is interactive, engaging, flexible,scalable, and robust. accessible in real time and via archives. making it useful for communications, information sharing, knowlwdge building, and learning.
